

Transplant First:  
Increasing pre-emptive listing and living donor kidney transplantation. How do we turn the dream into reality?

UKKW 2018 Pop up session

Kerry Tomlinson on behalf of KQUIP

# + Structure of session

- Aims and introduction
- Breakout 1: Barriers
- Transplant First and KQUIP
- Breakout 2: Solutions
- Summary

# + Aims

To improve our capability to increase access to transplantation as illustrated by the NHS Change Model

Latest: UK Renal Vascular Access Special...

[KQuIP Home](#) [About](#) [KQuIP Hub](#) [Latest](#) [Resources](#) [Events](#) [Forum](#)

## Welcome to the KQuIP Hub

Whether you are experienced or new to quality improvement (QI) then we hope you find the KQuIP Hub helpful in your work and in developing your QI projects for the benefit of your kidney patients.

You can either click on the icons below to take you to the resources in that category, or you can search for a topic or item of interest through the search icon...

## Improvement Hub

Select a theme to access improvement tools, resources and ideas from across the hub to collaborate and explore your ideas with colleagues, share your own improvements (learned and successes) or tell us about improvement resources you've seen elsewhere.

Emergency Care

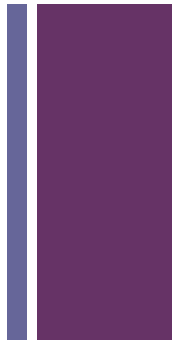

Patient safety

Quality Improvement

# Why do pre-emptive kidney transplant listing and Living Donor Kidney Transplantation (LDKT) matter?

- UK Renal Association: Planning, Initiating and Withdrawal of Renal Replacement Therapy
- We recommend that all medically suitable patients should be informed about the advantages of pre-emptive living kidney transplantation and efforts made to identify a potential donor to allow pre-emptive transplantation before the need for renal replacement therapy

# + Why does pre-emptive listing matter?

**Relationship between pre-emptive transplantation and outcomes among recipients of deceased donor kidney transplants.**

**Bertram L. Kasiske et al. JASN 2002;13:1358-1364**

**JASN**

**Does pre-emptive transplantation versus post start of dialysis transplantation with a kidney from a living donor improve outcomes after transplantation? A systematic literature review and position statement by the Descartes Working Group and ERBP**

	<b>Pre-emptive better</b>	<b>Same</b>	<b>Not clear</b>
Patient survival	47%	21%	31%
Graft Survival	56%	9%	34%
Acute Rejection	77%	15%	8%
Delayed Graft Function	2-3.37%		4-9.7%

**Within 1 year of dialysis probably makes little difference**

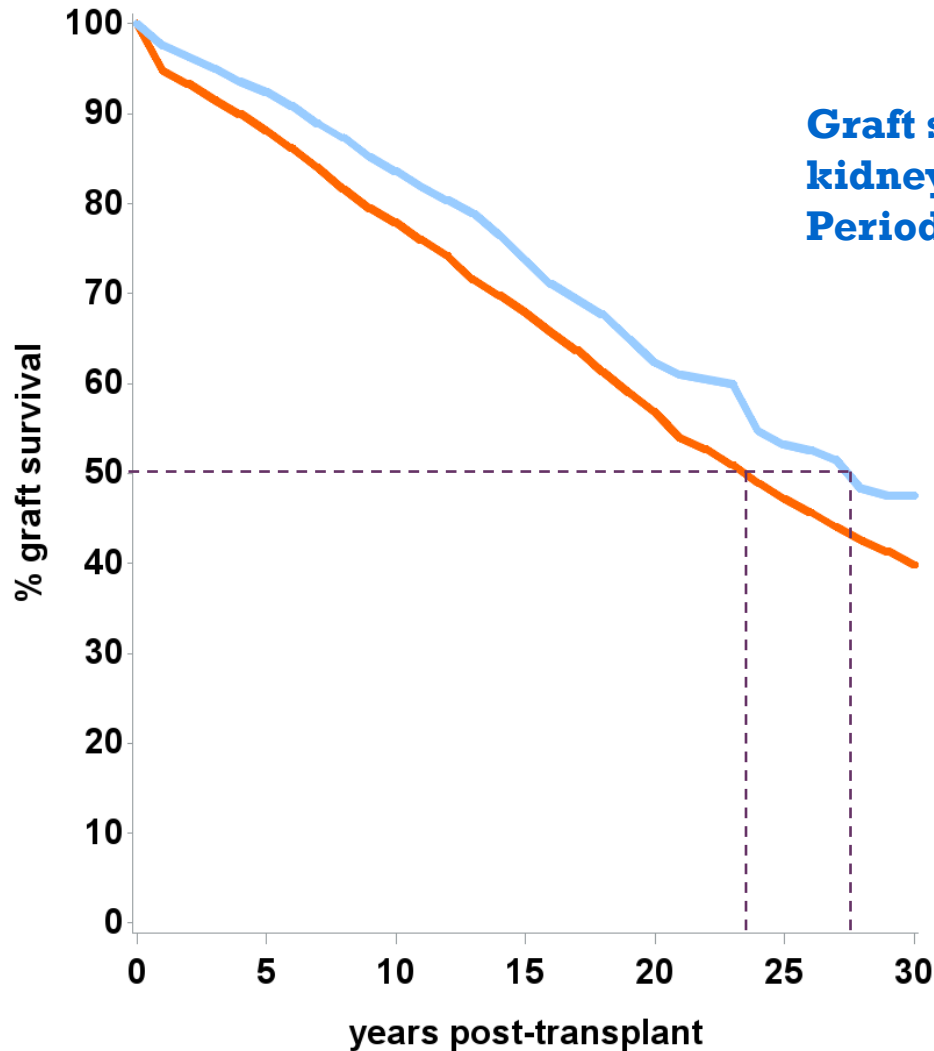

# Improving pre-emptive listing is not about:

- Transplanting people earlier than is good for them
- Changing listing criteria
- Favouring the care of pre-emptive patients over those on dialysis

# Why does Living Donor Kidney Transplantation matter?

**Graft survival estimates following kidney transplant**  
Period analysis, 01Apr12 – 31Mar16

Median survival estimates:  
Living donor ~ 27 years  
DBD donor ~ 23 years

Increased numbers of transplants

# Variability, Variability, Variability

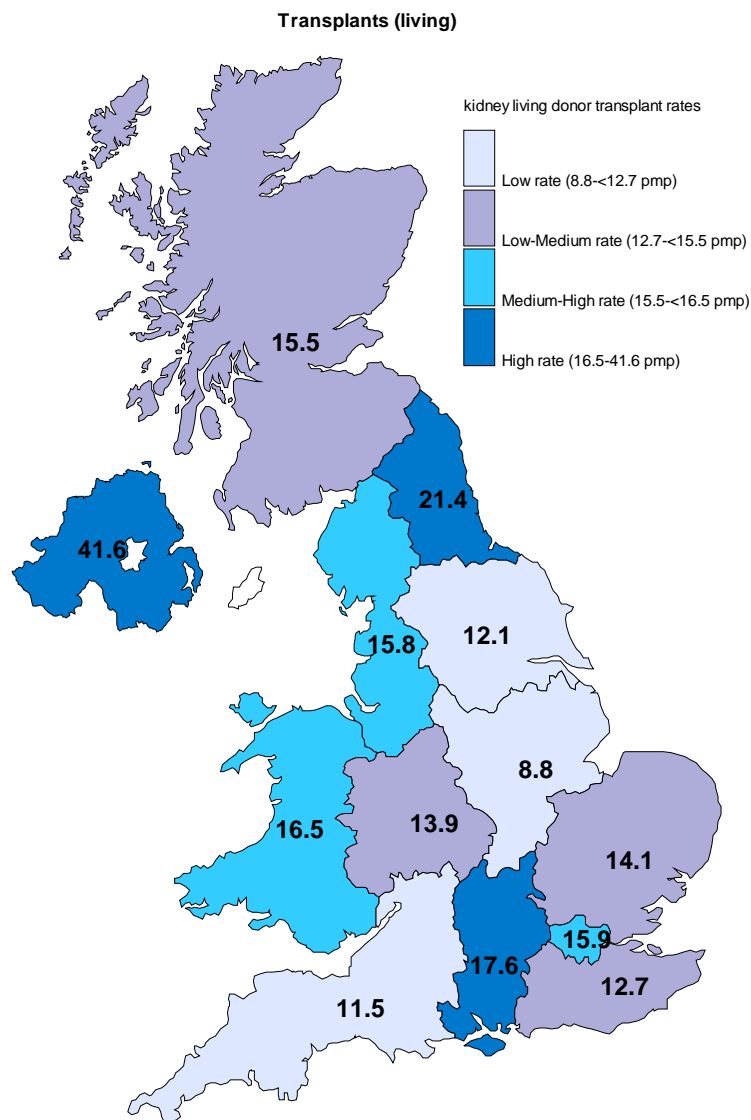

Blood and Transplant

Figure 3.11 Adult pre-emptive listing rates by centre, registrations between 1 April 2015 and 31 March 2016

Source: Annual Report on Kidney Transplantation 2016/17, NHS Blood and Transplant

Figure 2.7 Living donor kidney transplant rates (pmp) by recipient country/Strategic Health Authority of residence

- Your chance of getting a LDKT, getting on the transplant list in a timely fashion and getting a pre-emptive transplant varies widely in the UK

- Is that acceptable?

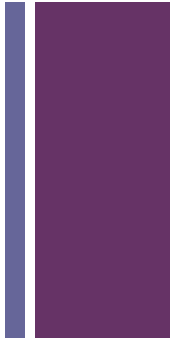

- Why might that be?

# What we know

## ATTOM: Patient factors associated with pre-emptive listing

- Age > 50
- Ethnic group (Asian and Black)
- BMI (> 35)
- Education
- Car Ownership
- Accommodation
- Employment
- Time First seen by nephrologist
- Diabetes
- Cerebrovascular disease
- Vascular Disease
- Malignancy
- Heart Disease
- Heart Failure
- Current Smoker

# ATTOM: Factors associated with LDKT

Factors associated with living donor kidney transplantation: Multivariate analysis

Limited health literacy

# + Why does it matter to us?

- Better outcomes for limited resource
- Pride in doing a job well
- GIRFT and Peer review are on their way..

# + Why does it matter to us?

"When my kidneys failed, getting a kidney transplant became the most important thing that I had ever wanted in my life. I have never wanted anything more and never will. Each step of the way I was accompanied by a desperate longing for it to happen, and every setback and delay was something I felt acutely, and caused a lot of anxiety"

# + Breakout session 1

- Rules of engagement
- Be open (even if you think you know the answer)
- Be non-hierarchical
  - Transplanting and non-transplanting
  - Consultants and MDT
- If you are talking all the time stop (particularly consultants)
- The silent member holds the key?

# + Breakout session 1

- What are the barriers to improving access to pre-emptive transplant listing in your unit
  
- What are the barriers to improving access to Living Kidney Donor transplantation in your unit

# ATTOM: Centre factors associated with transplant listing

- Centre variables linked to pre-emptive listing were
  - Being a transplant centre
  - Number of consultant nephrologists
  - Whether transplantation is discussed with all patients
- Centre variables linked better access to listing after dialysis were
  - Number of consultant nephrologists
  - Written protocol

# Barriers to LKDT

- **Lack of accessible information**
  - GP lack of knowledge
  - Uncertainty about information resources
  - Donors coming forward unaware how to access teams
  - Uncertainty about information resources
  
- **Pathway issues**
  - Not giving information upstream e.g. in low clearance clinic
  - Not being able to do all workup locally
  - Radiology department schedules
  - Batching donors
  - Complexity/length of pathways
  - Ability to personalise (e.g. out of hours appointments)
  - Matching donor and recipient timelines- especially if done across two centres
  
- **Resources/Finance**
  - Location of HTA assessors and Psychologists
  - GP responses to queries delayed
  - Limited resource (staffing or money for tests)
  - Living Donor Co-ordinator (LDC) time
  - LDCs often single handed- back up for donors when they are away
  - Parts of pathway not funded in non-transplant units
  
- **Skills/Knowledge**
  - How to discuss recipient concerns for donors
  - Transplant expertise in low clearance settings
  - Accessing UK Living Donor kidney Sharing Scheme
  
- **Uncertainty**
  - Perception of risk and how to convey it meaningfully
  - Whether to contact donors

# + Transplant First in the West Midlands

NHS  
 Blood and Transplant

Figure 3.11 Adult pre-emptive listing rates by centre, registrations between 1 April 2013 and 31 March 2014

Pre-emptive transplant listing from each renal unit April 17-Dec 17

Renal Units

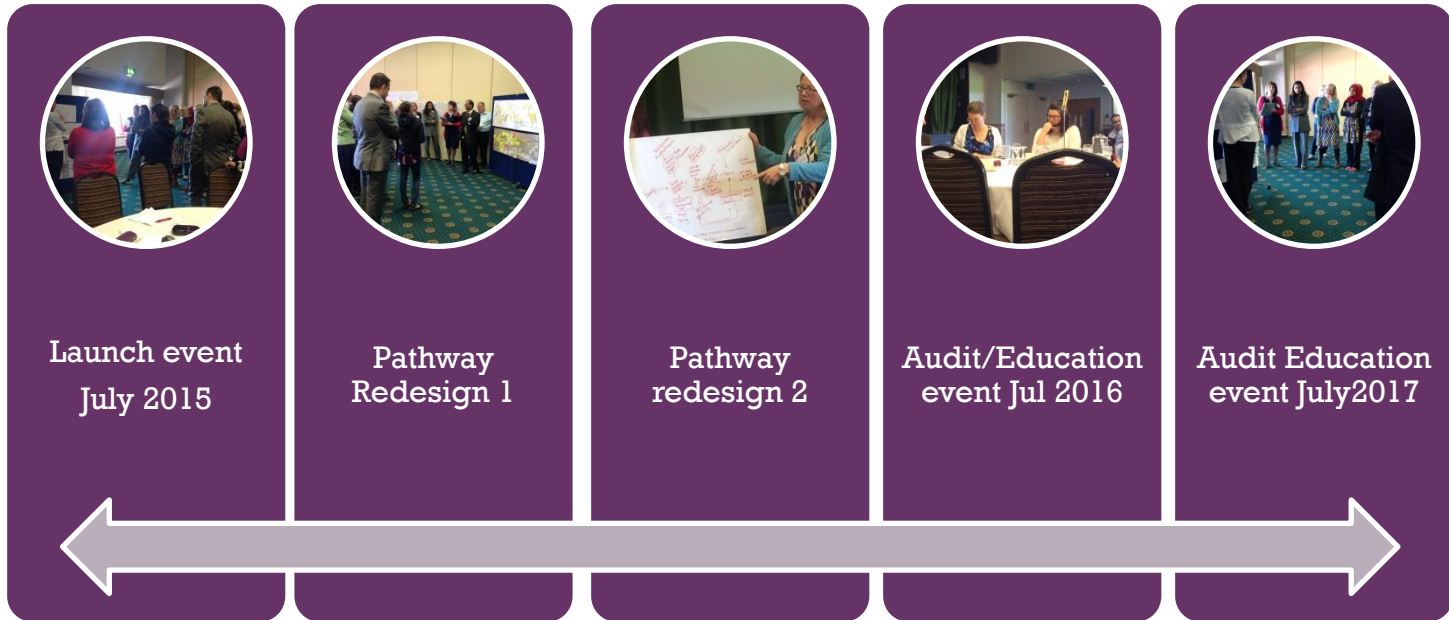

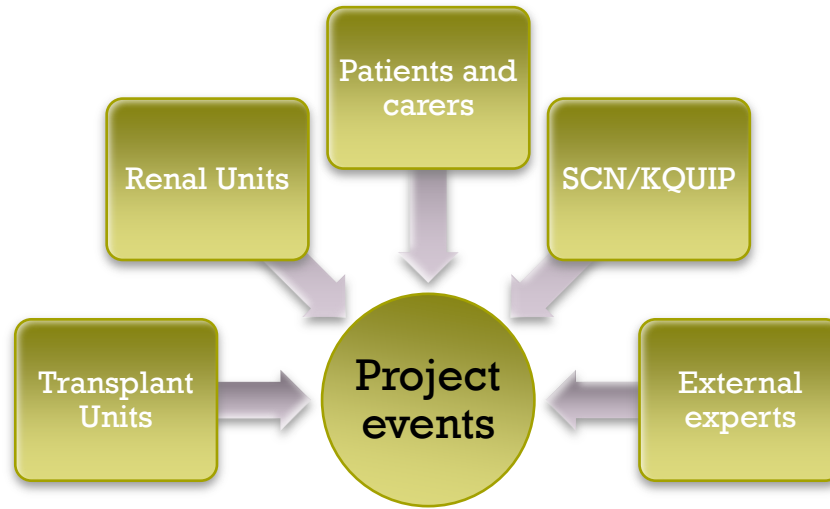

Think Kidneys · 26/04/2018  
 Lots more sharing ideas about process/ transplant pathway #transplantfirst looking at the question What are the issues?

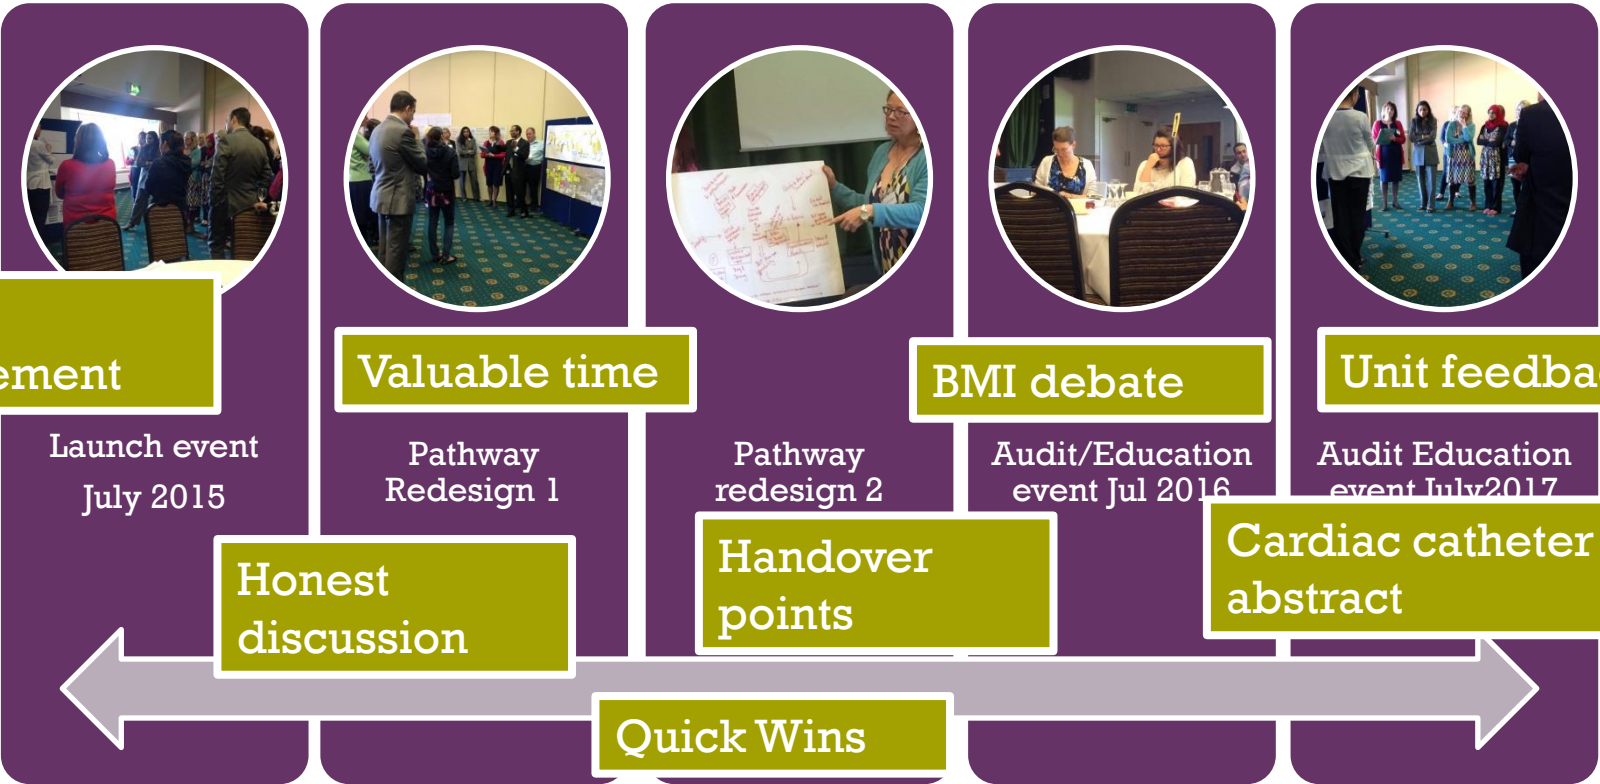

Transplant First · 26/04/2018  
 Really proud of the West Midlands kidney transplant community today. Showing changes they have made and plan to make to improve transplantation and living donation. Working together! 🙌  
 @ThinkKidneys @westmidskidney #Transplantfirst

🗨️ 4 ❤️ 10

# + What did we do?

**Patient Voice**

Sponsor team meetings, conference calls, working with RR, subgroup meetings, contact with units etc

# + Transplant First and KQUIP

## How to deliver Transplant First in your region

**THINK KIDNEYS**

Transplant First! [Enhanced Dashboard Data](#) [Transplant listing data](#) [Summary](#) [Charts](#) 2018 Q2 ▾

### Enhanced dashboard data (2018 Q2)

INCLUDE All patients in unit who started Haemodialysis or Peritoneal Dialysis for established renal failure in the quarter  
 Failure.  
 INCLUDE patients who start haemodialysis or peritoneal dialysis for established renal failure.  
 INCLUDE patients with a failing transplant who start dialysis in the quarter

EXCLUDE from any patient who had first been seen by the Nephrologist less than 90 days prior to starting dialysis (for  
 EXCLUDE patients who start haemodialysis or peritoneal dialysis for acute kidney injury.

ID no ①	Status ②	Reason ③	Comment
1	Working up or under discussion	Referred for Assessment when eGFR < 15	
2	Active on list		
3	No documented decision	Patient DNA on at least 3 separate assessment Appointments	
4	Working up or under discussion	Medically Complex	
5	Working up or under discussion	Referred for Assessment when eGFR <	

**Measurement for improvement and RCA**

### KQUIP National Projects

Following input from the renal community KQUIP will be focusing on three priority areas for national quality improvement projects. These projects are all at different stages of development and further details on each one can be found below.

#### Transplant First

Improving access to kidney transplantation. Pre-emptive transplant listing and kidney transplantation rates vary across the UK. Transplant First has been developed in the West Midlands by the [West Midlands Clinical Network](#). Read more about Transplant First [here](#).

# Data : Enhanced Dashboard RCA

(It's taken ages so I am telling you about it whether you like it or not!)

West Midlands Strategic Clinical Network

Transplant *FIRST*

Renal Unit	Stoke - North Midlands
Contact Email	

List all patients who started Dialysis , HD or PD in quarter who fit inclusion criteria - ending 31/12/15 (nb total should be same as denominator for dashboard return)

ID no	Renal unit use only (do not include hosp or NHS no)	Transplant status (choose one for each patient)	Reason patient still "working up or under discussion" or "no documented decision" (if you have chosen one of these categories in previous column please choose category from drop down list)	Comment
1		Active on list		
2		Suspended from list		
3		Unsuitable		
4		Working up or under discussion	Referred for Assessment when eGFR < 15	
5		No documented decision		
6		Unsuitable		
7		Working up or under discussion		
8		Unsuitable		
9		Suspended from list		
13		No documented decision	Unsuitable for transplant but NOT documented	
14		Working up or under discussion	Referred for Assessment when eGFR < 15	
15		Working up or under discussion	Referred for assessment within 1 year of predicted date of reaching ESRF	
16		Working up or under discussion	Patient DNA on at least 3 separate assessment Appointments	
17		Working up or under discussion	Medically Complex	
18		Working up or under discussion	Delays in system	

Must complete if 'Working up or under discussion' or 'No decision documented' in previous column - Transplant status

# Data: Transplant listing RCA

List all patients who were registered on the renal transplant list in quarter no matter how long they had been on dialysis or if they were pre-emptive

ID no	Renal unit use only (do not include hosp or NHS no)	Date patient started dialysis	Date patient was transplant listed	Number of days from start of RRT to listing	Adjusted with pre-emptive listing =0	For all patients who have not been listed pre-emptively please give reason from drop down list
1			30/01/2017	0	0	
2	07/07/2015	18/01/2017		551	551	Medically complex
3			14/03/2017	0	0	
4	15/12/2016	20/02/2017		65	65	Referred for assessment within 1 year of predicted date of reaching ESRF
5			20/03/2017	0	0	
6			15/04/2017	0	0	
				0	0	
				0	0	Referred for assessment when eGFR <15
				0	0	Referred for assessment within 1 year of predicted date of reaching ESRF
				0	0	Patient DNA on at least 3 separate assessment appointments
				0	0	Medically complex
				0	0	Previously unsuitable but became suitable
				0	0	Unplanned start
				0	0	Transferred in
				0	0	Delays in System

# + In development

## Enhanced dashboard data (2018 Q2)

INCLUDE All patients in unit who started Haemodialysis or Peritoneal Dialysis for established renal failure in the quarter AND had been known to the Nephrologist for at least 90 days prior to the date on which the patient is coded as having Established Renal Failure.

INCLUDE patients who start haemodialysis or peritoneal dialysis for established renal failure.

INCLUDE patients with a failing transplant who start dialysis in the quarter

EXCLUDE from any patient who had first been seen by the Nephrologist less than 90 days prior to starting dialysis (for purpose of this data exclude patients transferred into your units care less than 90 days prior to starting dialysis).

EXCLUDE patients who start haemodialysis or peritoneal dialysis for acute kidney injury.

ID no <sup>?</sup>	Status <sup>?</sup>	Reason <sup>?</sup>	Comment	Actions
1	Working up or under discussion	Referred for Assessment when eGFR < 15		 
2	Active on list			 
3	No documented decision	Patient DNA on at least 3 separate assessment Appointments		 
4	Working up or under discussion	Medically Complex		 
5	Working up or under discussion	Referred for Assessment when eGFR < 15		 
<input type="text" value="6"/>	Working up or under discussion ▾	<input type="text" value=""/> <small>This field is required</small>	<input type="text"/>	 

Add new entry

# + Lessons learnt from data

- Transferable causes for missing listing:
  - Late referrals (Predictable but rapidly declining patients)
  - Failing transplants
  - Different approaches to cardiac angiography pre-dialysis
  - Referral to other specialties slows listing

It only works if you use it locally

- Local causes for missing listing :
  - Specific clinics (e.g. diabetes multi-disciplinary)
  - Different feeder hospitals
  - Other reasons that will be apparent locally e.g. variable unit practise

# ATTOM: Patient factors associated with pre-emptive listing

- Age > 50
- Ethnic group (Asian and Black)
- BMI (> 35)
- Education
- Car Ownership
- Accommodation
- Employment
- Time First seen by nephrologist
- Diabetes
- Cerebrovascular disease
- Vascular Disease
- Malignancy
- Heart Disease
- Heart Failure
- Current Smoker

Transplant First: Improve understanding of barriers to transplantation in your unit and remove them

# ATTOM: Centre factors associated with transplant listing

- Centre variables linked to pre-emptive listing were
  - Being a transplant centre
  - Number of consultant nephrologists
  - Whether transplantation is discussed with all patients
- Centre variables linked better access to listing after dialysis were
  - Number of consultant nephrologists
  - Written protocol

[www.thinkkidneys.nhs.uk/kquip/wp-content/uploads/sites/5/2017/04/Transplant\\_First\\_Standards\\_and\\_Guidelines\\_Final\\_version\\_091116.pdf](http://www.thinkkidneys.nhs.uk/kquip/wp-content/uploads/sites/5/2017/04/Transplant_First_Standards_and_Guidelines_Final_version_091116.pdf)

# + Breakout session 2

- What actions can you take to improve access to pre-emptive transplant listing in your unit?
  
  
  
  
  
  
  
  
  
  
- What actions can you take to improve access to Living Kidney Donor transplantation in your unit?

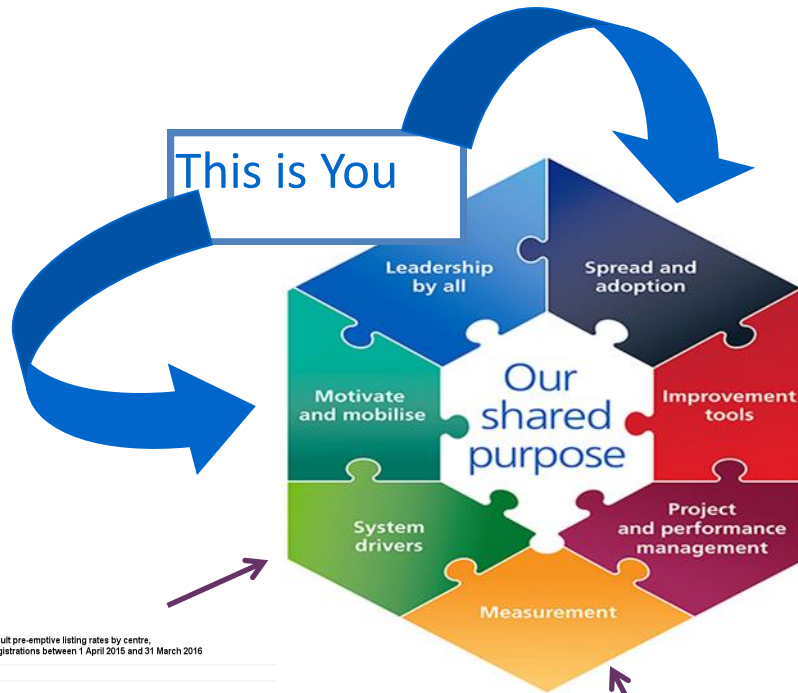

# Changes, ideas and learning from Transplant First project (see handout)

- Appointing lead nurse and doctor for transplantation in each renal unit (now mandated)
- Appointing transplant co-ordinator
- Centralising referrals to transplant centre via one e mail address
- Sending patients mobile with referrals so they could be texted to avoid DNA
- Joint assessments clinics set up with transplant centre
- Set up transplant listing clinic in Renal Units (may be nurse led)
- Restructuring Renal /Diabetes clinic which had a high rate of “missed” patients
- Transplant centre MDT to speed up complex decision making
- Regular feedback to teams as to why patients were “missed”
- Renal unit low eGFR MDT meetings systematically including transplant status (may include co-ordinator)
- Systematically recording CKD5 patients transplant status in their letters and IT system
- Using IT to produce reports of CKD5 patients without transplant status
- MDTs to discuss listed patients
- Recording Living Donor workup on IT system
- Collaborative working became more normal
- Increasing early transplant discussion (defining pathway, cue cards, team education)
- One stop/fewer stop recipient or Living donor clinics
- Shared regional practice (e.g. early cardiology assessment) to encourage adoption

# + Go forth and multiply!

**How to deliver Transplant First in your region**
