Where we all make a difference

Royal Liverpool & Broadgreen
University Hospitals NHS Trust

Current Population

Site	Patients	AVF/AVG	PNL
Royal	148	88	60
Broadgreen	106	82	24
Halton	35	24	11
Warrington	44	33	11
St Helens	53	41	12
HHD	40	31	9
Total	426	299	127

Were we are now

- 71% AVF prevalence
- 12 month 70-78%
- To improve

1. More patients to start with a working AVF. Addressing this via audit and action plan

2. Implement Magic to promote good cannulation practice and improve patient experience. In a bit to prolong AVF longevity

Challenge

- Time is our biggest challenge
- Encourage patient and staff engagement in the MAGIC process
- Time to implent the process
- We have five dialysis units
- Aim to invest in time and education of several vascular access link nurses

What are we proud of

- Lots of fantastic staff who want to provide quality nursing care
- New first dialysis pathway
- We want to improve
- Our new patient support group

Sharing

- Promote links with Aintree and Arrow-Park
- So we can become vascular access group for Merseyside
- So we can learn from and support each other
- We have started this process with a Merseyside vascular access WhatsApp group
